

PROJECT MANAGER AFRICA

Satelligence started two years ago with the mission to make satellite data work on the ground in the areas of the world where it makes the biggest difference. We use Earth Observation (EO) data to create impact with our clients in protecting forests and increasing food production. Our products enable commodity traders, impact investors, certifiers, and development banks with information on what is happening on the ground. We help them meet their zero-deforestation commitments, ESG's or manage their investment portfolios.

Position: project manager, fulltime

Location: Utrecht

Closing date: we encourage you to apply before July 2018, but the position will be open until we find the right candidate.

Contact: Ernst Kuilder kuilder@satelligence.com

Satelligence

We are a diverse team of 14. Some of us have years of experience working for a satellite remote sensing company as optical sensor specialists or spaceborne radar expert. Others are experienced software developers, remote sensing application PhD, data scientists and we have liaisons stationed abroad. You will work with our young customer team and in close collaboration with one of the founders.

Product

Through our Forest and Commodity Analytics platform we answer our clients questions such as: *where are the low risk cocoa smallholders that require financing for replanting? What is the risk of flooding in these areas? How much deforestation is happening or happened in my supply chain or area of investment?* This is a tried and tested alignment between our product offering and what customers want but we are also a startup with a complex data product and variable awareness of EO in the market in general. For West Africa we are currently refining our data components. This effort is driven and funded through business development projects together with Dutch and local partners.

You

You speak French, preferably have an existing network in West Africa and are able to lead us through different projects in parallel. You have a clear affinity with Earth Observation and a few years of experience in managing multiple complex projects while focussing on business development.

Your tasks:

- Manage multiple projects in West Africa

- Identify and develop business opportunities and partnerships
- Play a proactive role in the team as an experienced project manager.

Procedure

Cool? Email us, tell us why you are interested (nice and short!). We read it, possibly ask you for more information and will invite you for a chat. If that meeting goes well, we will give you a use case to work on from home, another meeting to talk about your approach to the case and hire you.
